## Basic Vehicle Requirements

- Must meet all regulations listed in Subchapter E of vehicle code

\*\*\*A link to PA code book is on enhanced inspection page

- All emissions items that were originally installed must be installed and fully functioning.** This includes, but is not limited to, the "Check Engine" light which cannot be "on" in a vehicle newer than 1995
- Air bag restraint system needs to be operating normal if equipped**  
*(The light in dash cannot stay on; it must come on during the bulb check function and then go off indicating the system is functioning normal)*
- Anti-lock brakes must be operating normal if equipped**  
*(The light in dash cannot stay on; it must come on during the bulb check function and then go off indicating the system is functioning normal)*
- Tire Pressure monitoring system must be operating normal if equipped**  
*(The light in dash cannot stay on; it must come on during the bulb check function and then go off indicating the system is functioning normal)*

### Window tint cannot have less than 70% light transmission

\*\* See link on Enhanced page for the sun screening chart

- Headlights must be aimed properly and they will be checked for brightness**

Minimum specifications are 7,500 candle power on low beam and 10,000 candle power on high beam (there is a good chance if the headlights have plastic lens that are cloudy, they will fail)

### **Commonly missed items**

- Check engine/anti-lock brake/air bag light on in dash (basically all warning lights in dash must be off)
- Head lights that are not aimed properly and headlight adjusters broken
- Headlights that are too dim
- Stickers on windows *(no stickers, except for inspection stickers can be on the windshield and on all other glass, stickers cannot be above 3-1/2" of the lowest exposed portion of the glass)*
- Glass tint that is too dark
